Answer:

The model of ASRock industrial designed the [Crashless] function for failure during BIOS updating process.
Please refer the step below to recovery the system.

1. Save the BIOS files to the bootable USB stick and plug it into USB port on the M/B.
2. Boot up the system and it will recovery the BIOS by [Crashless] function automatically.
3. After the process finished, the system will boot up automatically.
