Answer:

The model of ASRock industrial designed the [Crashless] function for failure during BIOS updating process.
Please refer the steps below to recovery the system to fix it.

1. Save the BIOS files to the root directory of bootable USB stick and plug it into the system.
2. Boot up the system and it will recovery the BIOS by [Crashless] function automatically.
3. After finishing BIOS update, the system will reboot automatically.
